

SuperSurv SHAP Summary

Top 5 Features by Mean Absolute SHAP

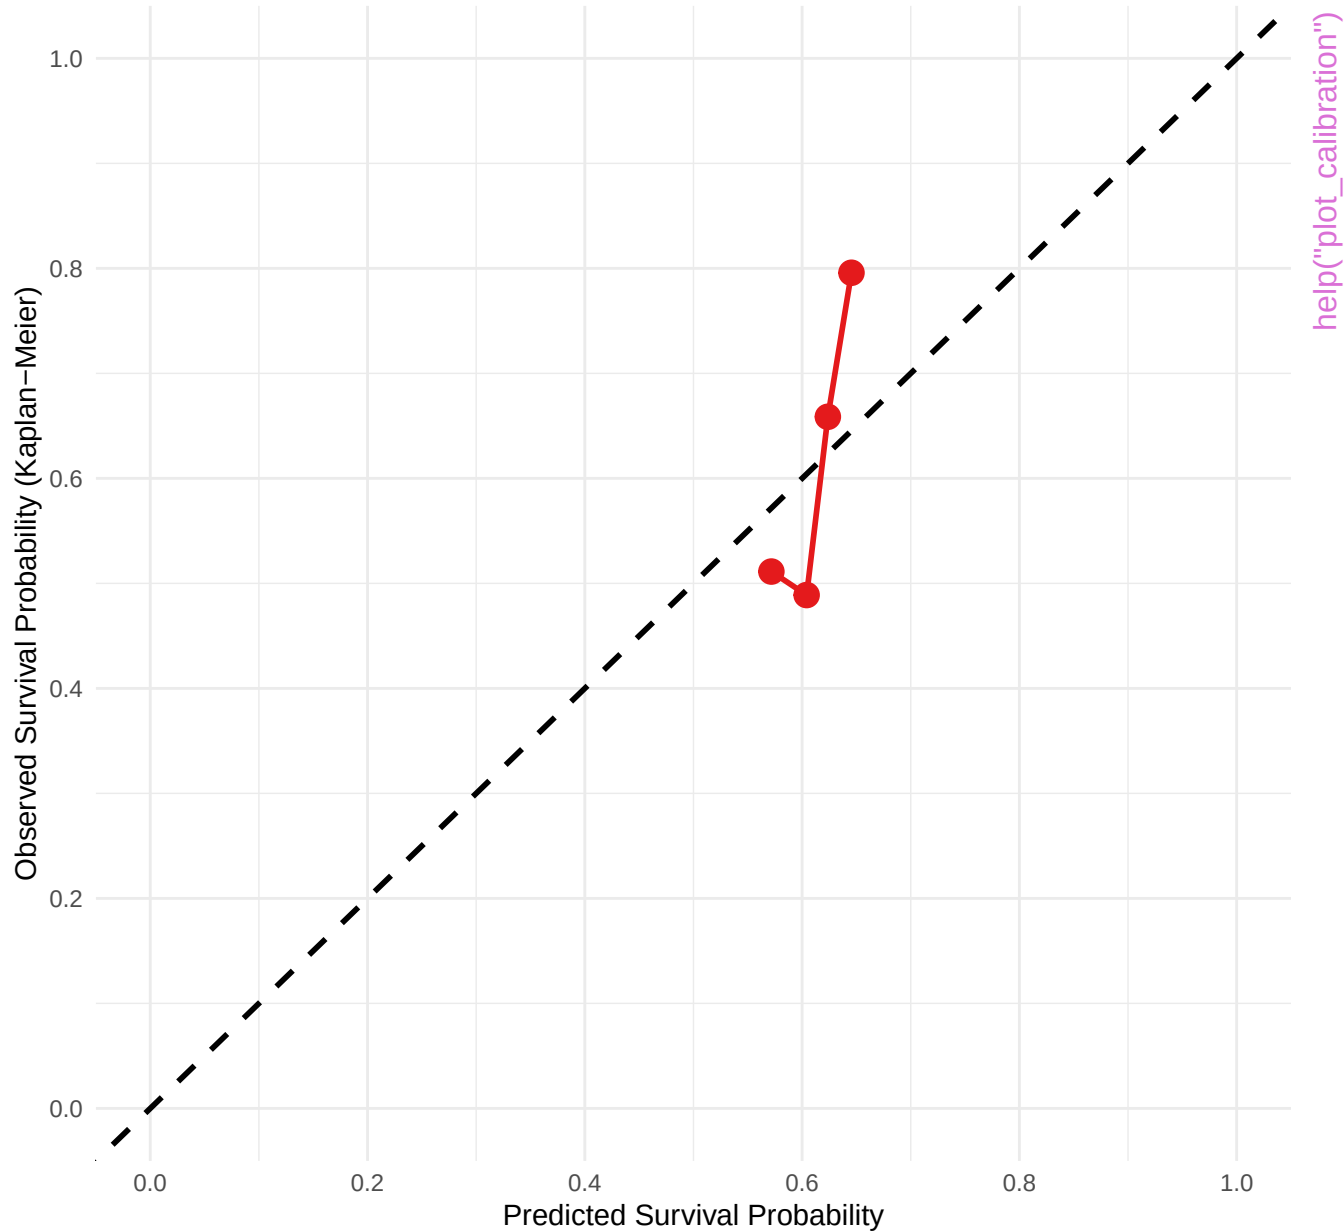

IPCW Brier Score

Brier Score (Lower is better)

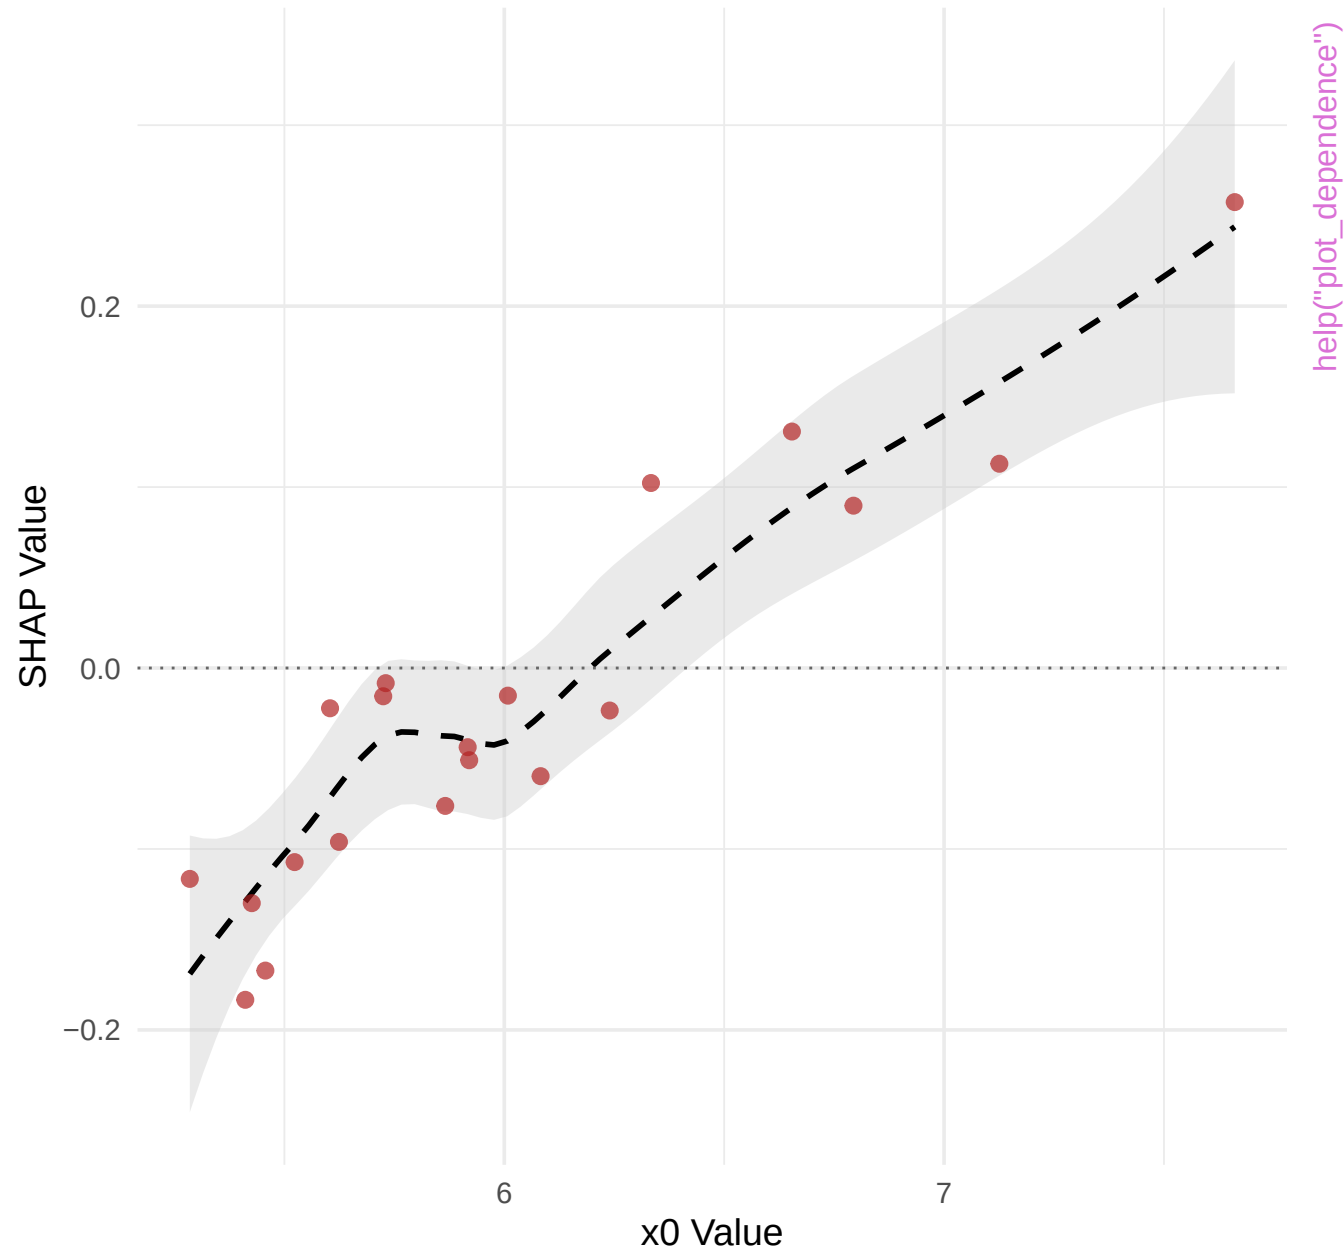

Calibration Curve at Time = 100

Red line = Model Calibration | Dashed line = Perfect Calibration

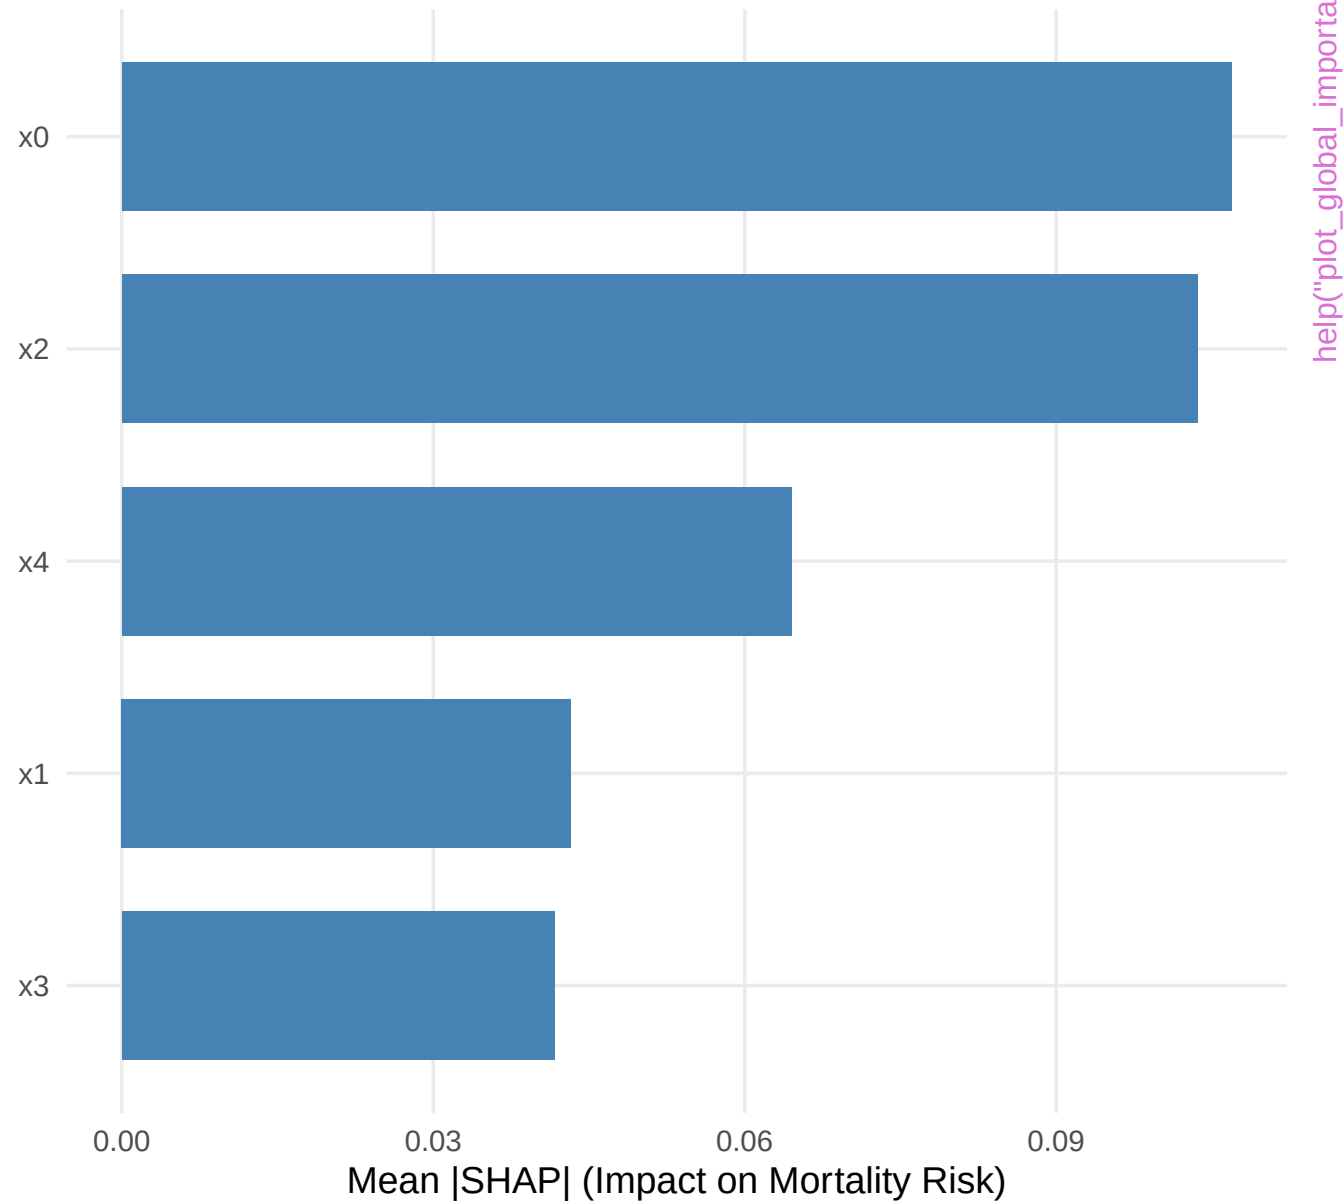

SHAP Dependence: x0

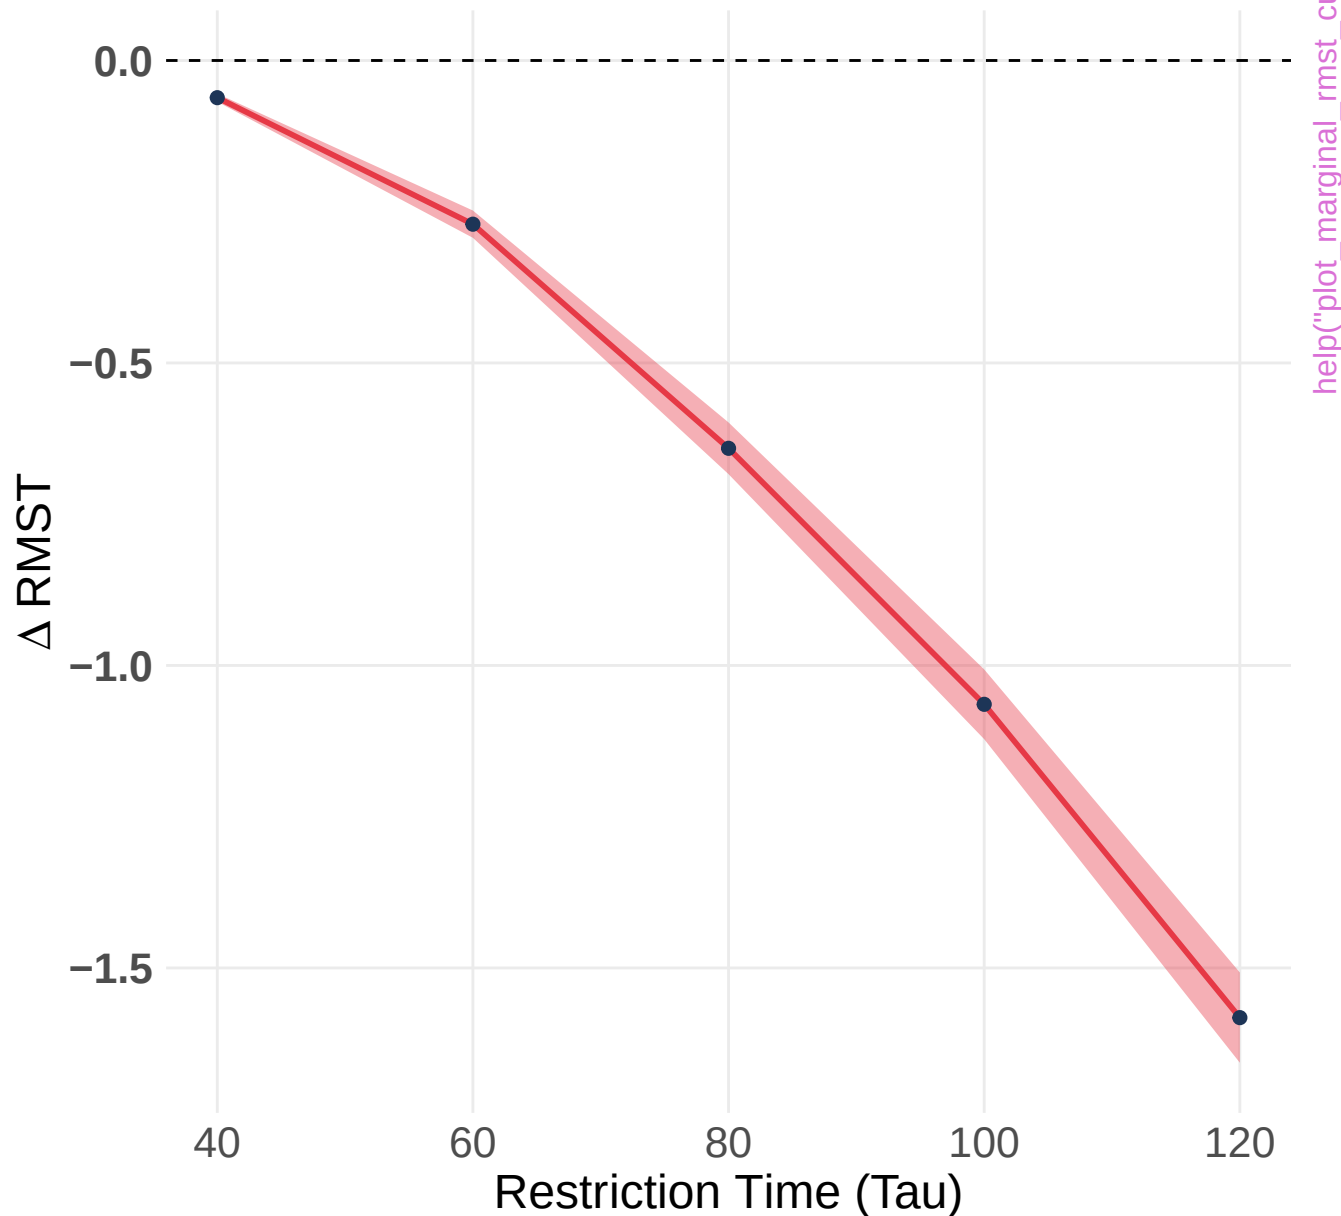

SuperSurv: Ensemble Feature Importance

Based on Weighted Ensemble SHAP Values

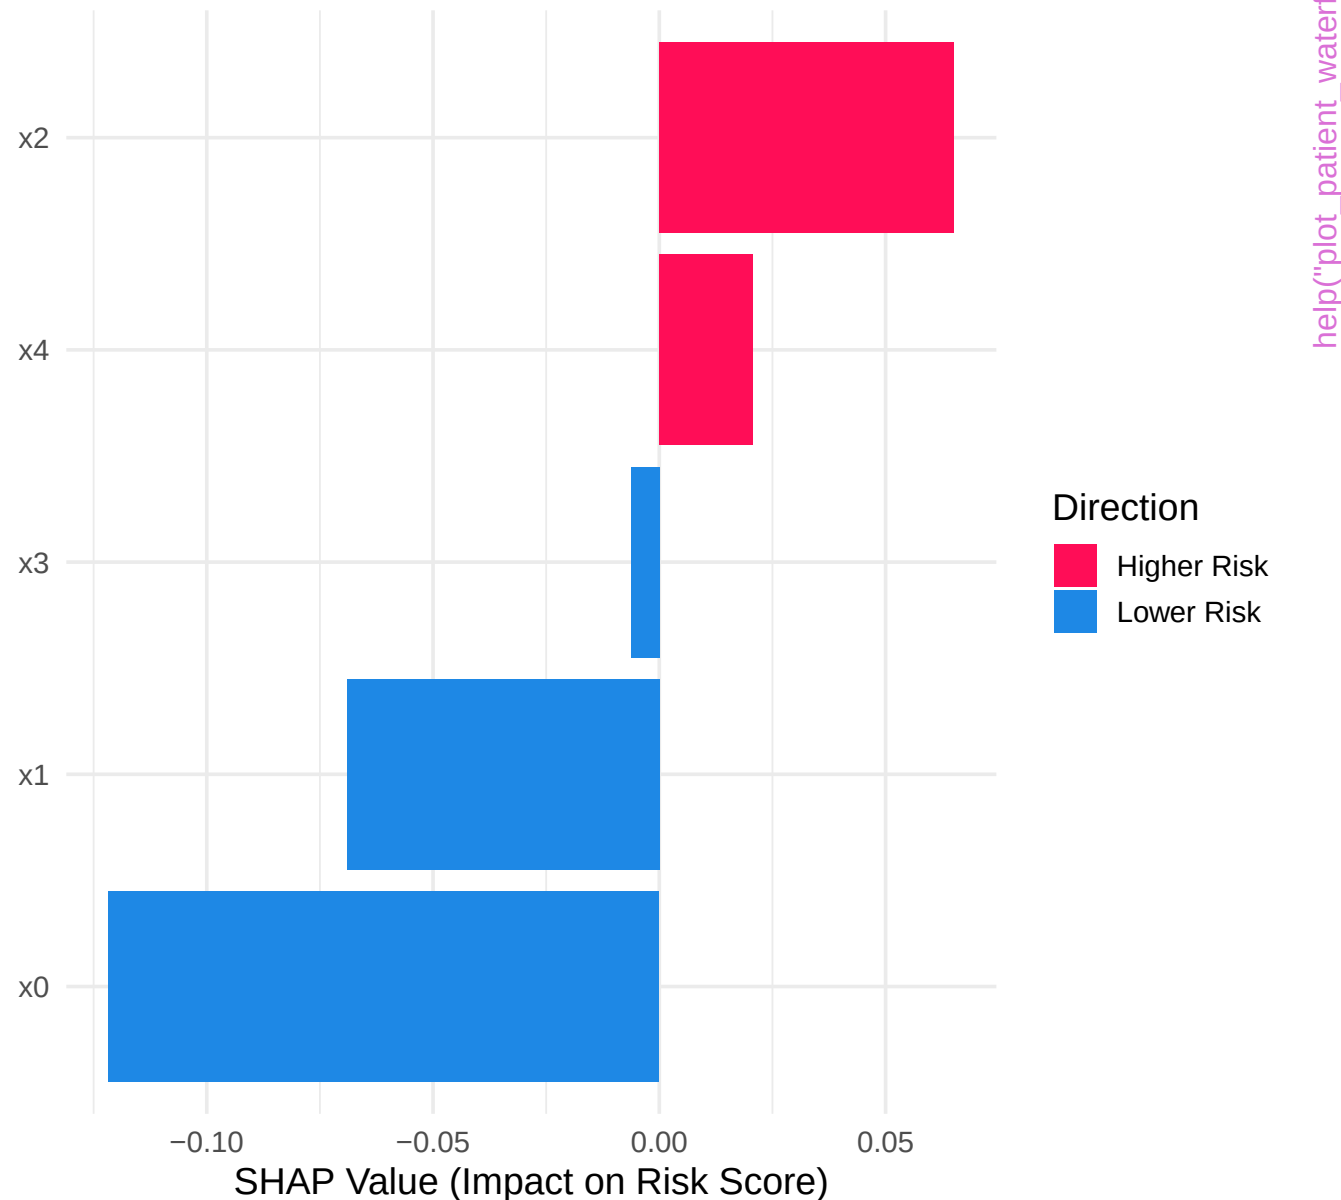

Adjusted Marginal RMST Contrast Over Time

Difference in RMST with 95% perturbation-based confidence intervals

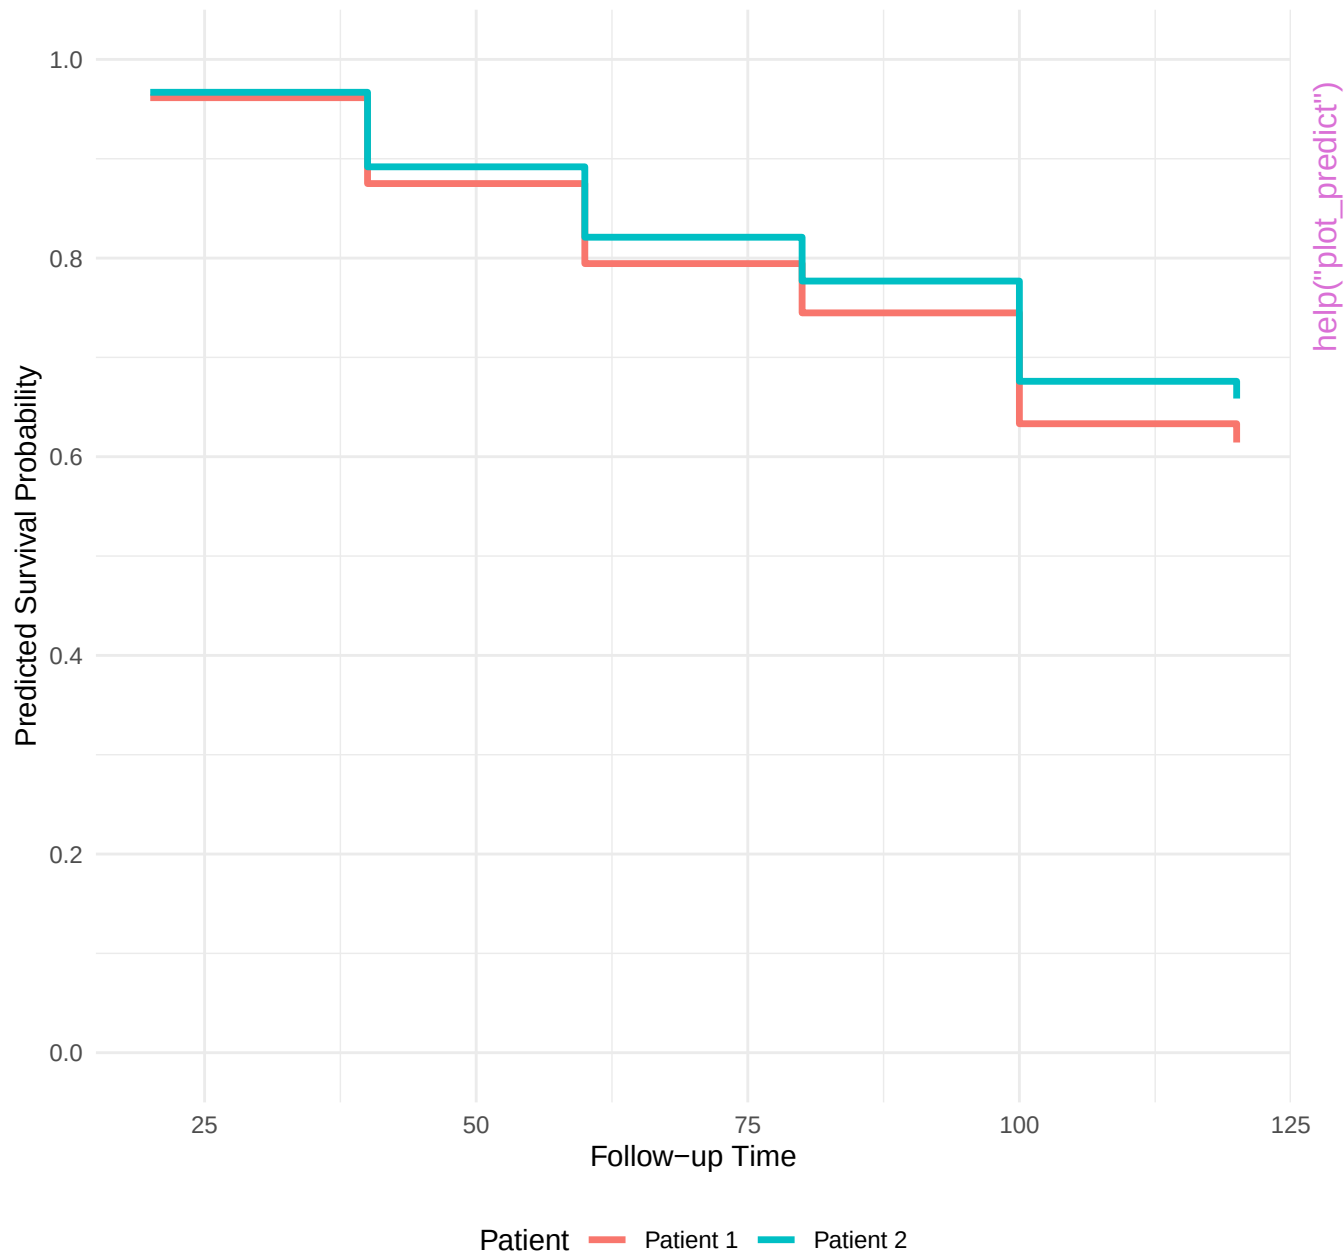

Patient 1 : Risk Factor Contribution

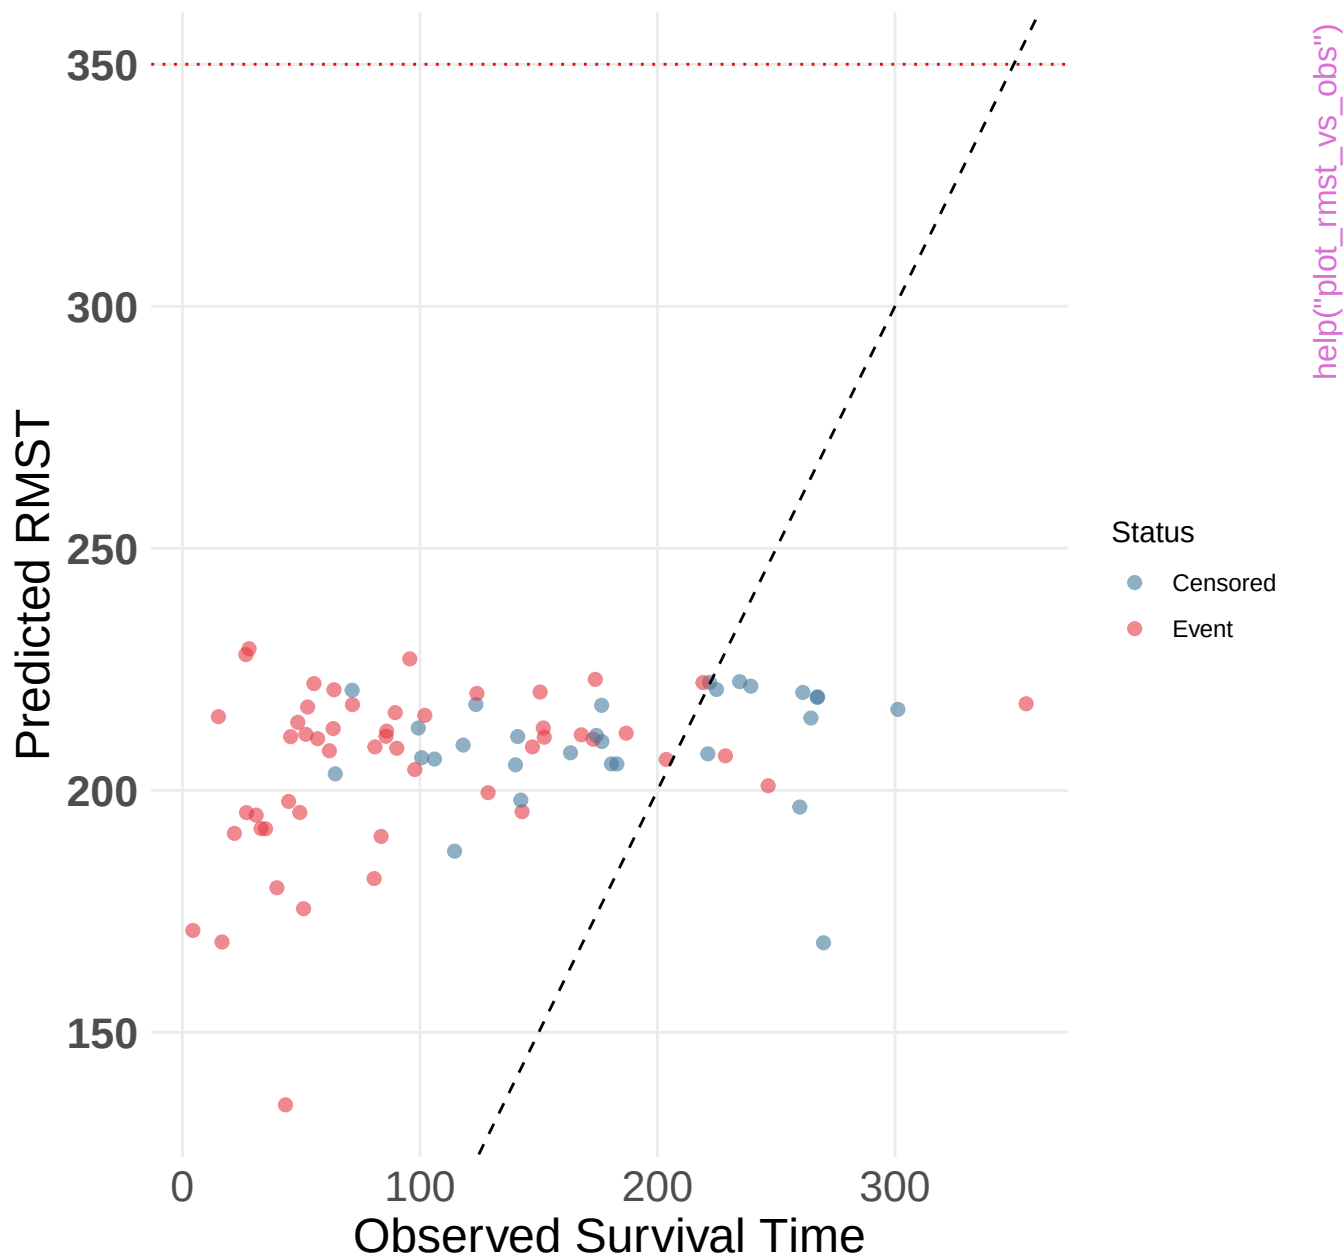

How individual features pushed this patient away from the average risk

Predicted Patient Survival Curves

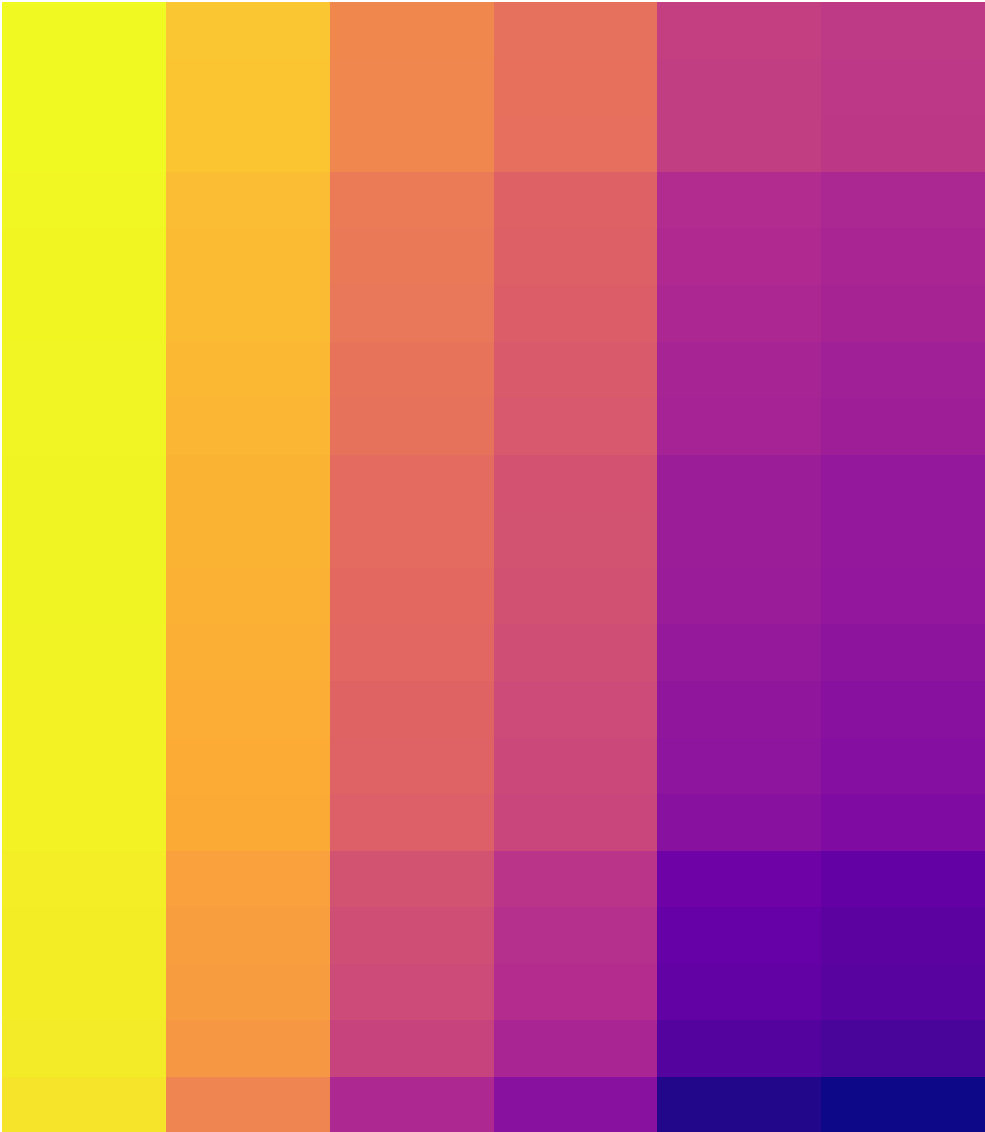

Predicted RMST vs. Observed Time (Tau = 350)

SuperSurv: Patient Risk Trajectories

Sorted by predicted survival at final follow-up
